

About Sveaskog

Sveaskog, a state-owned company, is the largest forest owner in Sweden. The company manages approximately 14 per cent of the productive forest land, operates in approximately 170 municipalities and has over 800 employees around the country.

Sveaskog's core business is to cultivate the forest. We sell wood, pulpwood, chips, biofuel, seedlings and forest services.

Financial performance

6,597

-9%

Net sales decreased by eight per cent to MSEK 6,597. Prices of wood raw materials were down by nine per cent on average, while total delivery volumes fell by one per cent compared with the previous year.

1,120

Operating profit decreased by 24 per cent to SEK 1,120 million. This lower profit is primarily due to lower prices and increased costs for forest and nature conservation and roads.

82

At the end of the year, Sveaskog changed the accounting method for valuing the company's forest assets. This means that the value of Sveaskog's forest assets now totals approximately SEK 82 billion.

CEO's comments

We need to have a vigorous and engaged debate about forests and forestry. It is through dialogue and discussion that we can take on the challenges that exist and do our best in terms of both timber extraction and biodiversity.

Per Matses,
President and CEO

Forest: facts and figures

10.6

Sveaskog supplied 10.6 million cubic meters of sawlogs, pulpwood and biofuel to customers in 2020.

50,000

Each year, Sveaskog carries out thinning and regeneration felling on approximately 50,000 hectares of forest land.

97

A pine or spruce that is felled is on average 97 years old.

3.9

Forest holdings amount to 3.9 million hectares, of which 3 million is productive forest land.

x3

Three new trees are planted for each tree that is felled.

All of the forest is FSC® and PEFC™ certified, providing a guarantee of sustainable forestry.

Breakdown of tree species on Sveaskog's land

Market area North

- Pine 70.4%
- Spruce 20.3%
- Deciduous 9.2%

Market area South

- Pine 54.9%
- Spruce 36.3%
- Deciduous 8.8%

Trends and business environment

Just like other companies, Sveaskog is affected by what happens in the world at large. Here are a few of the events and trends that affected us during 2020:

- > The coronavirus pandemic
- > Intense debate about forestry
- > Construction of wooden buildings gains ground
- > Spruce bark beetle infestation in the forest
- > Uncertain global economy
- > Increase in outdoor activity
- > Circular transition

Sveaskog's business model

Sveaskog's core business is cultivating the forest and selling timber and pulpwood as well as biofuel. Sveaskog also deals in land and develops the forest as a place for fishing, hunting and other outdoor experiences.

Sveaskog's total deliveries

External timber purchases from private landowners 1, 706 (1, 701) thousand m³/sub

From own forest 6,248 (6,127) thousand m³/sub Total delivery volume 10,629 (10,648) thousand m³/sub

Total delivery volumes broken down by product range. External timberfrom othercompanies and imports 2,675 (2,819) thousand m³/sub

Customers

Biofuel customers

Sveaskog supplies around 50 biofuel customers in Sweden, primarily heating plants and paper and pulp

mills.

Other forest owners

Approximately 3,500 forest owners buy seedlings and forest management services from Sveaskog.

Forest

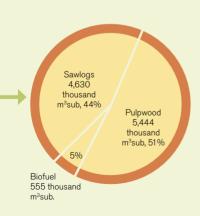

Sveaskog's forest holdings of 3.9 million hectares, of which approximately 3 million hectares are productive forest land, are

Sawmills

Sveaskog supplies sawlogs to some 70 sawmills in Sweden. The sawlogs are refined and used primarily for buildings and furniture.

Paper and pulp mills Sveaskog supplies

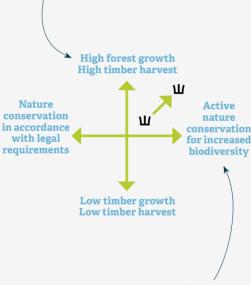

pulpwood to some
20 paper and pulp mills
that manufacture packaging
paper and other paper products.

Long-term focus

Sveaskog has developed a long-term focus that involves a positional shift featuring equal ambitions for:

Active forest management that results in sustainable **high forest growth** with future **high timber yields**, enabling increased timber deliveries to customers

Active nature conservation work to increase the ecological values of our land and ensure rich biodiversity.

Agenda 2030

Sveaskog's activities and value creation contribute to the 17 sustainable development goals of the UN 2030 Agenda for Sustainable Development. Sveaskog works actively to achieve the goals and has mapped out the goals where we can contribute in the most relevant way.

The forest's climate benefits

The forest contributes to climate work in two ways, firstly by capturing carbon dioxide already in the atmosphere and storing it in biomass. This allows the forest to compensate for emissions in other sectors of society. The forest's growth can also be transformed into renewable forest products that can replace fossil products and concrete. This reduces the supply of carbon dioxide to the atmospheric cycle.

New climate goal

Sveaskog's climate goal from 2010 expired in 2020. A new climate goal will be prepared in 2021, including a climate adaptation policy and milestones for 2026.

In total, just over 8 million tonnes of carbon dioxide equivalents were stored in living tree biomass and land during the year.

Total emissions in 2020, tonnes of CO₂e

• Forestry and felling: 41,200

Transport: 69,700

Road construction: 9,100

Electricity and heating: 600

Travel: 2,300
 Total CO₂e footprint:
 122,800 (+1%)

During the year, Sveaskog's operations generated carbon dioxide emissions of 122,800 tonnes, which means that the company has reduced emissions by 22% compared to 2010.

Forest ownership and utilisation of the forest create not only economic benefits, but also other values. Our standing timber binds carbon dioxide, and products from wood raw material can be used to replace materials from fossil sources. A forest that is managed properly also has an important role in the water cycle. Forests are also available for recreation and outdoor activities. Sveaskog also contributes to a sustainable value chain through responsible purchasing and collaborating with serious suppliers.

Our operations

Sveaskog utilises the forest with an ambition to balance economic, ecological and social interests. Our forests are certified in accordance with the Swedish FSC[®] and PEFC™ standard, and we also require certification of all imported timber. Our customers are guaranteed a responsible and sustainable product, all the way from forest to consumer.

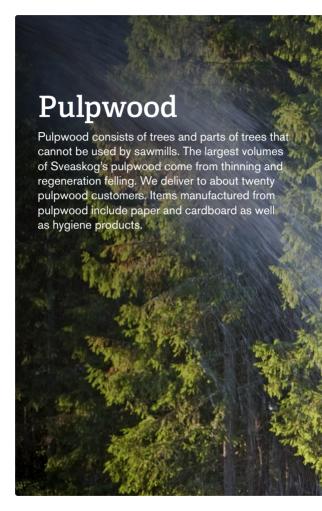

Sawlogs

Sveaskog offers a wide range of sawlogs and that meet the needs of customers for a variety of volumes, tree species, qualities and dimensions. Timber from our own forests is supplemented by volumes purchased externally. Sveaskog supplies sawlogs to many of Sweden's biggest sawmills. They, in turn, supply mainly the construction and furniture industry.

Seedlings

The Svenska Skogsplantor business area has a growing capacity of approximately 140 million forest plants per year, which corresponds to around one third of what is planted in total in Sweden each year. In addition to forest seeds and processed plants, rejuvenation services are also offered: planting, soil preparation, protective treatments and growth controls.

Just over 25,000 hunters go hunting on Sveaskog's hunting grounds every year. As a holder of hunting rights, we grant part of this right to hunting teams, clubs, nature tourism entrepreneurs, associations and private individuals. Hunting is an important tool in maintaining the balance in game populations. In recent years, Sveaskog has conducted several different projects to increase interest in hunting among young people.

Sveaskog also promotes the sustainable development of fisheries and protecting habitats so that biodiversity is preserved.

Our customers

As an independent actor in the timber market with 130 customers in all, mainly in Sweden, we aim to strengthen our position through a long-term increase in sales volumes. With good customer relations, a professional, responsible organisation and a strong brand, Sveaskog will be the leading player and be perceived as a long-term, reliable and developing business partner.

We have pushed the boundaries of how to do business with timber in a number of areas. And we have done this together with our customers, which demonstrates that we have a high degree of trust and understanding of each other's circumstances and needs.

Patrick Bäckström, Head of Market in Sveaskog's Market Area North.

Nature conservation

Every year, Sveaskog undertakes a number of initiatives to protect the conservation values of the forest and biodiversity.

1

Sveaskog sets aside 20 per cent of all productive forest land for nature conservation.

85 per cent of the forests set aside are 100 years old or older.

2

Sveaskog owns **37 eco parks**. At least half of their area is set aside for nature conservation, maintenance and other initiatives to benefit nature.

3

For all felling and cleaning activities, we take nature into consideration and ensure that **important environments** for plants and animals are left untouched.

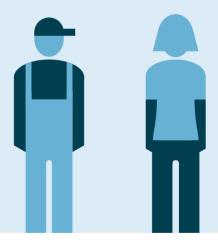

We carry out different types of nature conservation such as, for example, recreating wetlands or leaving birch stumps where the woodpeckers can make nests.

To make conservation work more effective, we follow up on and evaluate the nature conservation measures that we take.

A developing and inclusive employer

Sveaskog's ambition is to build a strong, sustainable and inclusive corporate culture that attracts the right skills and provides employees with the conditions to succeed.
